

Having Enough Money for Today and Tomorrow

December 16, 2020 — 2:00 PM – 3:00 PM EST

What are all of the costs of running a drinking water utility? This webinar will help water systems recognize the costs related to operations and capital needs, including costs that systems often overlook. The webinar will also identify which costs are tied to water production and will describe how costs change over time. The objective of the webinar is for water systems to be able to calculate their financial needs for the next five years. The webinar will also summarize the state and federal loan and grant programs that are available to drinking water utilities.

Registration*

Fee: No cost to attend

Questions? E-mail ctt@mtu.edu

This webinar is presented by the Great Lakes Environmental Infrastructure Center (GLEIC), the Environmental Finance Center (EFC) for EPA Region 5

*Required for fulfillment of continuing education. The Center for Technology & Training's continuing education policy is available at ctt.mtu.edu/ContinuingEducation.

Presenters

Glenn Barnes is director of Water Finance Assistance. He provides educational programs and technical assistance to drinking water utilities across the country on finance and management topics. In particular, Barnes' work focuses on financial planning, rate setting, water affordability, workforce planning, and data driven decision making for small utilities, tribal utilities, and non-community water systems. Barnes holds a Bachelor of Arts in English Literature and a Master of Public Administration.
